

Besproken routine Powershell les

Print alert messages by adding a new variable and then using an if statement to check the user input.

```
$answer = Read-Host -Prompt "Print the alert messages (y/n)?";  
While (($answer -ne "y") -And ($answer -ne "n")) {  
$answer = Read-Host -Prompt "Invalid input, please enter y or n";  
}  
If ($answer -Eq 'y') {  
# code to print alert messages  
}
```
